GWT SDK makes it easy to build web application with complex UI design. The set of widgets and layout classes in GWT provides building block which are missing in basic HTML. But how about writing JS library using GWT? Well thanks to [gwt-exporter](#) it is very easy to build standalone JavaScript library using GWT. Just to prove it, I built a simple JS library which exposes few GWT Layout classes as JS functions. So now you can use GWT layout in any HTML page without writing single line of GWT code.
