SWTML Application Window Templates

Simple application window with Menubar, Toolbar, a composite and status label bar

```
<?xml version="1.0"?>
<!--Simple application window with Menubar, Toolbar, a composite and status label bar

<shell id="SWTApplication">
<grid-layout
<menu
<menu-item
<menu
<menu-item
<menu-item
<menu
<menu-item
<menu
<menu-item
<menu
<tool-bar
<tool-item
<tool-item
</tool-bar
<composite
<grid-layout

<!-- Add widgets here -->
</composite

<label id="status" text="Status bar"
<grid-data

</label
</shell
```

Generated UI :

Simple application window with Menubar, Coolbar, a composite and status label bar

```
<?xml
<!--Simple application window with Menubar, Coolbar, a composite and status label bar
<shell
<grid-layout
<menu
</menu
      Note: Add resize event to CoolBar to handle resize of bar.
           SWT.Resize="com.sheelapps.swtml.examples.TestListener"
       // event code
     if(event.type==SWT.Resize) {
            if(Display.getCurrent().getActiveShell()!=null)
            Display.getCurrent().getActiveShell().layout();
        }
 -->
<cool-bar
<composite
<grid-data
```

```
<!-- Add widgets here -->
</composite                                                    >
<label                                                         Text
                                                               Hello
</label                                                        >
</shell                                                        >
```
