<combo>

Creates Combo widget.
Examples :

```
 <combo>
            <item>Item 1</item>
            <item>Item 2</item>
        </combo>
        <!-- Read only with 4th item is selected -->
        <combo style="SWT.READ_ONLY">
            <item>Item 1</item>
            <item>Item 2</item>
            <item>Item 3</item>
            <item>Item 4</item>
            <!-- select the 4th item in the combo -->
            <select>3</select>
        </combo>
        <!-- With visible Item is drop-down set to 8 -->
        <combo style="SWT.READ_ONLY" visibleItemCount="8">
            <item>Item 1</item>
            <item>Item 2</item>
            <item>Item 3</item>
            <item>Item 4</item>
            <item>Item 5</item>
            <item>Item 6</item>
            <item>Item 7</item>
            <item>Item 8</item>
        </combo>
        <!-- Selection Event Listener -->
        <combo SWT.Selection="com.sheelapps.swtml.examples.TestListener">
            <item>Item 1</item>
            <item>Item 2</item>
            <item>Item 3</item>
            <item>Item 4</item>
            <item>Item 5</item>
            <item>Item 6</item>
            <item>Item 7</item>
            <item>Item 8</item>
            <select></select>
        </combo>
```
