

<table> and <table-column>

Creates Table and Table-Column.

Example :

<table

```
style="SWT.VIRTUAL | SWT.BORDER | SWT.V_SCROLL"  
linesVisible="true" headerVisible="true" itemCount="1000"  
SWT.SetData="com.sheelapps.swtмл.examples.TestListener">  
  <table-column text="column1" style="SWT.LEFT"  
    width="150" />  
  <table-column text="column2" width="100" />
```

</table>

Listener for Table SetData :

```
public class TestListener implements org.eclipse.swt.widgets.Listener
```

```
//// handleEvent()
```

```
if(event.widget instanceof Table) {
```

```
    TableItem item = (TableItem) event.item;
```

```
    int index = ((Table) event.widget).indexOf (item);
```

```
    item.setText ("Col 1 - " + index);
```

```
    item.setText (1, "Col 2 - " + index);
```

```
}
```

column1	column2	
Col 1 - 0	Col 2 - 0	
Col 1 - 1	Col 2 - 1	
Col 1 - 2	Col 2 - 2	
Col 1 - 3	Col 2 - 3	
Col 1 - 4	Col 2 - 4	
Col 1 - 5	Col 2 - 5	
Col 1 - 6	Col 2 - 6	
Col 1 - 7	Col 2 - 7	
Col 1 - 8	Col 2 - 8	
Col 1 - 9	Col 2 - 9	
Col 1 - 10	Col 2 - 10	
Col 1 - 11	Col 2 - 11	
Col 1 - 12	Col 2 - 12	
Col 1 - 13	Col 2 - 13	
Col 1 - 14	Col 2 - 14	
Col 1 - 15	Col 2 - 15	
Col 1 - 16	Col 2 - 16	
Col 1 - 17	Col 2 - 17	
Col 1 - 18	Col 2 - 18	
Col 1 - 19	Col 2 - 19	
Col 1 - 20	Col 2 - 20	
Col 1 - 21	Col 2 - 21	
Col 1 - 22	Col 2 - 22	
Col 1 - 23	Col 2 - 23	
Col 1 - 24	Col 2 - 24
